1. Introduction

This chapter provides general information about the purpose, scope and contents of this Conformance Statement.

1.1 Scope and field of application

The scope of this DICOM Conformance Statement is to facilitate data exchange with equipment of Elekta Oncology Systems. This document specifies the compliance to the DICOM standard (formally called the NEMA PS 3.X-1998 standards). It contains a short description of the applications involved and provides technical information about the data exchange capabilities of the equipment. The main elements describing these capabilities are the supported DICOM Service Object Pair (SOP) Classes, Roles, Information Object Definitions (IOD) and Transfer Syntax's.

The field of application is the integration of the Elekta Oncology Systems equipment into an environment of medical devices.

This Conformance Statement should be read in conjunction with the DICOM standard and its addenda.

1.2 Intended audience

This Conformance Statement is intended for:

- (Potential) customers,
- System integrators of medical equipment,
- Marketing staff interested in system functionality,
- Software designers implementing DICOM interfaces

It is assumed that the reader is familiar with the DICOM standard.

1.3 Contents and structure

The DICOM Conformance Statement is contained in chapter 2 through 7 and follows the contents and structuring requirements of DICOM PS 3.2-2001. Additionally, the Appendices following chapter 7 specify the details of the applied IODs, handling of SCP-specific status codes and extended configuration details.

1.4 Used definitions, terms and abbreviations

- DICOM definitions, terms and abbreviations are used throughout this Conformance Statement. For a description of these, see DICOM PS 3 2001.
- The word Elekta in this document refers to Elekta Oncology Systems Ltd.
- The word PrecisePLAN in this document refers to the Elekta Oncology Systems PrecisePLAN Treatment Planning System Product Release 2.00, or to Render-Plan 3-D ® Release 4.10 with DICOM 2.00.

1.5 References

[DICOM PS 3 2001]

The Digital Imaging and Communications in Medicine (DICOM) standard:

DICOM PS 3.X (X refers to the part 1 - 13) and Supplements.

National Electrical Manufacturers Association (NEMA) Publication Sales

1300 N. 17th Street, Suite 1847

Rosslyn, VA 22209, United States of America

1.6 Important notes to the reader

This Conformance Statement by itself does not guarantee successful interoperability of Elekta equipment with non-Elekta equipment. The user (or user's agent) should be aware of the following issues:

- Scope

The goal of DICOM is to facilitate inter-connectivity rather than interoperability. Interoperability refers to the ability of application functions, distributed over two or more systems, to work successfully together. The integration of medical devices into a networked environment may require application functions that are not specified within the scope of DICOM. Consequently, using only the information provided by this Conformance Statement does not guarantee interoperability of Elekta equipment with non-Elekta equipment. It is the user's responsibility to analyse thoroughly the application requirements and to specify a solution that integrates Elekta equipment with non-Elekta equipment.

- Validation

Elekta equipment has been carefully tested to assure that the actual implementation of the DICOM interface corresponds with this Conformance Statement. Where Elekta equipment is to be linked to non-Elekta equipment, the first step is to compare the relevant Conformance Statements. If the Conformance Statements indicate that successful information exchange should be possible, additional validation tests will be necessary to ensure the functionality, performance, accuracy and stability of prescription and prescription related data. Prospective users may contact Elekta for up-to-date information regarding available validation status and any known compatibility issues with specific 3rd party vendors. Ultimately, however, it is the responsibility of the user (or user's agent) to specify an appropriate test suite and to carry out additional validation tests on combinations of equipment used within the users environment. In particular integrators should not assume that the Elekta equipment would always be able to detect all forms of invalid data originating from 3rd party equipment.

- New versions of the DICOM Standard

The DICOM Standard will evolve in future to meet the user's growing requirements and to incorporate new features and technologies. Elekta is actively involved in this evolution and plans to adapt its equipment to future versions of the DICOM Standard. In order to do so, Elekta reserves the right to make changes to its products or to discontinue its delivery. The user should ensure that any non-Elekta provider linking to Elekta equipment also adapts to future versions of the DICOM Standard. If not, the incorporation of DICOM enhancements into Elekta equipment may lead to loss of connectivity and/or incompatibility.

2. Implementation Model

The DICOM Export within PrecisePLAN is a DICOM Client (SCU) for the purpose of exporting PrecisePLAN objects to external medical equipment. It provides the following features:

- Sending RT Plans to a remote database, often a Linear Accelerator or its patient management system.
- Sending CT images to a remote database.
- Sending DRR images (as RTIMAGE, CRIMAGE or SCIMAGE) to a viewing and portal imaging system.
- Sending RT Structure Set to a viewing, simulation, or similar system.
- Sending RT Dose to a Validation or similar system.

2.1 Application Data Flow Diagram

The PrecisePLAN DICOM Export behaves as a single Application Entity (AE). The related Implementation Model is shown in Figure 1 below.

2.2 Functional definition of Application Entity

The PrecisePLAN Application Entity acts as a Service Class User (SCU) of Verification and Storage Service Classes. The Application Entity is active only during an export from PrecisePLAN.

2.3 Sequencing of Real-World Activities

The user initiates the activity from the operator console by selecting one or more objects to be exported.

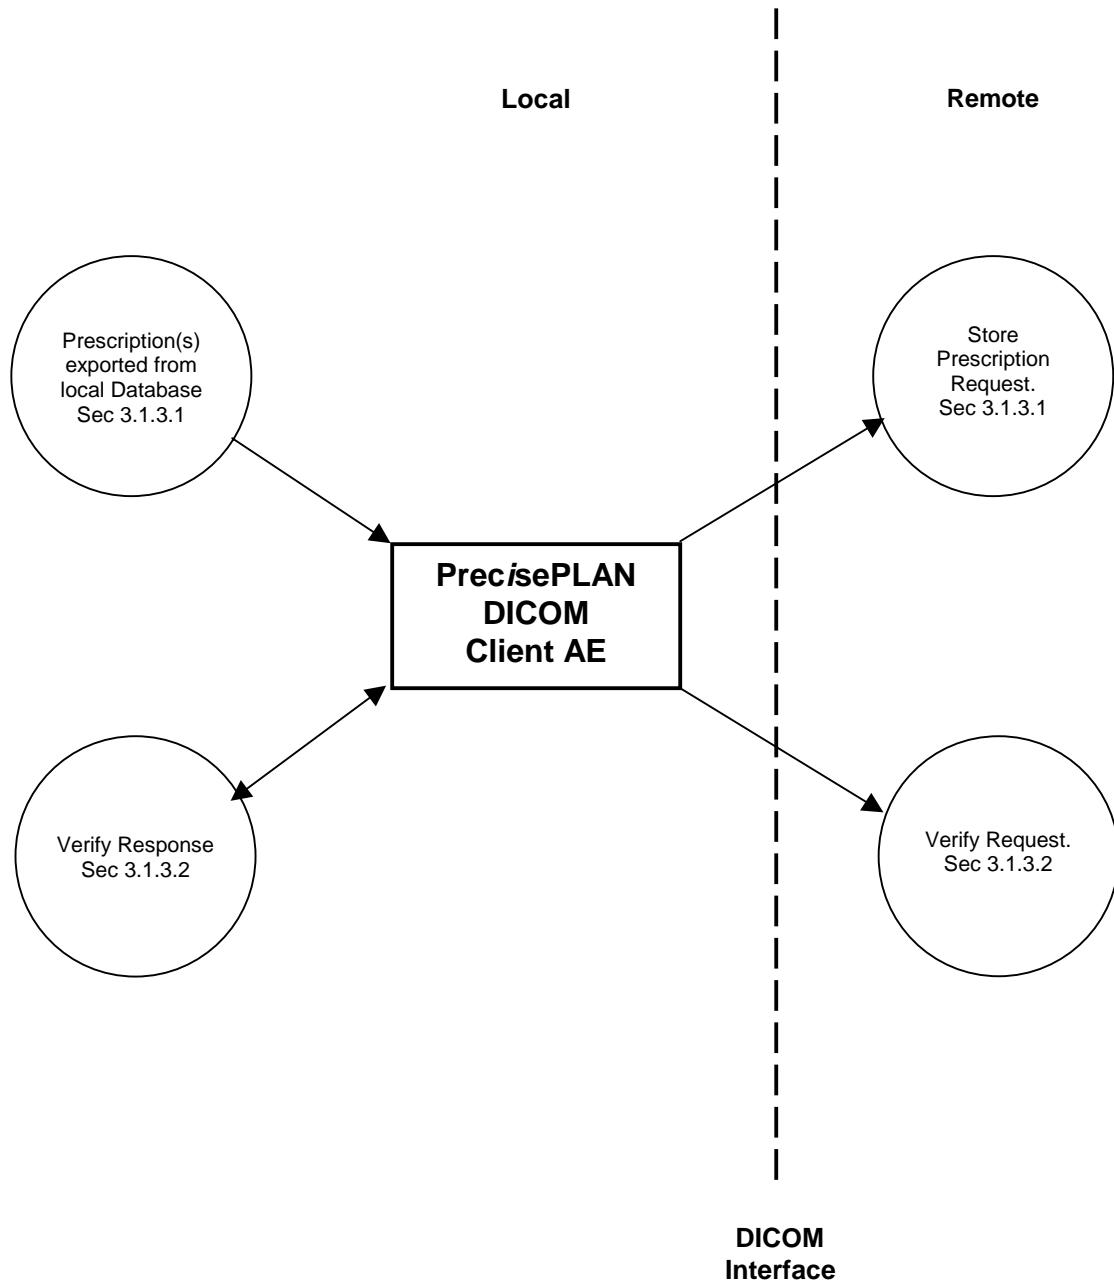

Figure 1 PrecisePLAN DICOM Export Implementation Model

3. AE Specifications

3.1 PrecisePLAN Export AE Specification

PrecisePLAN Client Application Entity provides Standard Conformance to the following DICOM V3.0 SOP classes as an SCU:

Table 1 SOP Classes supported by PrecisePLAN as SCU

SOP Class Name	UID
CR Image Storage	1.2.840.10008.5.1.4.1.1.1
CT Image Storage	1.2.840.10008.5.1.4.1.1.2
SC Image Storage	1.2.840.10008.5.1.4.1.1.7
RT Image Storage	1.2.840.10008.5.1.4.1.1.481.1
RT Dose Storage	1.2.840.10008.5.1.4.1.1.481.2
RT Structure Set Storage	1.2.840.10008.5.1.4.1.1.481.3
RT Plan Storage	1.2.840.10008.5.1.4.1.1.481.5
Verification	1.2.840.10008.1.1

3.1.1 Association Establishment Policies

3.1.1.1 General

The maximum PDU size for PrecisePLAN is configurable from a minimum of 4 Kbytes. There is no upper limit. It is limited by the available system resources. The default value is 64 Kbytes.

3.1.1.2 Number of Associations

PrecisePLAN supports one active association at a time as a Service Class User.

3.1.1.3 Asynchronous Nature

PrecisePLAN does not support asynchronous operations and will not perform asynchronous window negotiation.

3.1.1.4 Implementation Identifying Information

Implementation Class UID: 2.16.840.1.114090.1.0.2.0
Implementation Version Name: rtClient 2.0

3.1.2 Association Initiation Policy

PrecisePLAN initiates associations under the control of the operator for the purpose of

- Exporting prescriptions or related objects from the PrecisePLAN system to a Linac or other similar system (Sec 3.1.3.1 below)
- Verify the application level communication from PrecisePLAN to another system (Sec 3.1.3.2 below)

3.1.3 Association Acceptance Policy

PrecisePLAN client does not accept associations.

3.1.3.1 Store Prescriptions into PrecisePLAN Database

3.1.3.1.1 Associated Real World Activity

PrecisePLAN requests associations with remote systems that it wishes to send prescriptions for storage into the remote database.

3.1.3.1.2 Presentation Context Table

PrecisePLAN proposes following presentation contexts, listed in the order of preference.

Table 2 Proposed Presentation Contexts for PrecisePLAN Image Storage

Presentation Context Table					
Abstract Syntax		Transfer Syntax		Role	Ext. Neg.
Name	UID	Name List	UID List		
CR Image Storage	1.2.840.10008.5.1.4.1.1.1	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		
CT Image Storage	1.2.840.10008.5.1.4.1.1.2	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		
MR Image Storage	1.2.840.10008.5.1.4.1.1.4	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		
SC Image Storage	1.2.840.10008.5.1.4.1.1.7	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		
RT Image Storage	1.2.840.10008.5.1.4.1.1.481.1	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		

Table 3 Proposed Presentation Contexts for PrecisePLAN Prescription Objects Storage

Presentation Context Table					
Abstract Syntax		Transfer Syntax		Role	Ext. Neg.
Name	UID	Name List	UID List		
RT Dose Storage	1.2.840.10008.5.1.4.1.1.481.2	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		
RT Struct Storage	1.2.840.10008.5.1.4.1.1.481.3	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		
RT Plan Storage	1.2.840.10008.5.1.4.1.1.481.5	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		

3.1.3.1.3 C-STORE SCU Conformance

PrecisePLAN provides standard conformance for Storage as an SCU.

The PrecisePLAN system performs a Conformance Level 0 for Storage, i.e., not all DICOM Type 1 and 2 attributes received earlier by another module may have been stored for re-export. Also, a subset of the stored attributes may be exported. The attributes handled and their mapping is listed in the Appendices.

The PrecisePLAN operator determines the duration of storage of the originating prescription data in the local database.

3.1.3.1.4 Presentation Context Acceptance Criterion

Not applicable.

3.1.3.1.5 Transfer Syntax Selection Policies

Not applicable.

3.1.3.2 Verify Application Level Communication

3.1.3.2.1 Associated Real World Activity

PrecisePLAN requests associations from remote systems to verify the application level communication using the C-ECHO command.

3.1.3.2.2 Presentation Context Table

All of the presentation contexts shown in Table 4 below are offered:

Table 4 Acceptable Presentation Contexts for Verification

Presentation Context Table					
Abstract Syntax		Transfer Syntax		Role	Extended Negotiation
Name	UID	Name List	UID List		
Verification	1.2.840.10008.1.1	Implicit VR LittleEndian	1.2.840.10008.1.2	SCP	None
		Explicit VR LittleEndian	1.2.840.10008.1.2.1	SCP	None
		Explicit VR BigEndian	1.2.840.10008.1.2.2	SCP	None

3.1.3.2.3 C-ECHO SCP Conformance

PrecisePLAN provides standard conformance for Verification as an SCU.

3.1.3.2.4 Presentation Context Acceptance Criterion

Not applicable.

3.1.3.2.5 Transfer Syntax Selection Policies

Not applicable.

4. Communication Profiles

4.1 Supported Communication Stacks

PrecisePLAN application provides DICOM V3.0 TCP/IP Network Communication Support as defined in Part 8 of the DICOM Standard.

4.2 TCP/IP Stack

PrecisePLAN inherits its TCP/IP stack from the SGI IRIX 6.5 operating system upon which it executes.

4.3 Physical Media Support

PrecisePLAN supports Ethernet ISO.8802-3.

On Elekta supplied hardware platforms the connection type provided is 100/10BASE-T (RJ45 twisted pair).

5. Extensions/Specialisations/Privatisations

Not applicable.

6. Configuration

PrecisePLAN DICOM configuration is maintained through a special utility. The configuration changes are intended to be performed by Elekta service engineers or by Customer engineers with reference to the User Documentation.

6.1 AE Title/Presentation Address mapping

These changes are effective immediately after being committed.

6.1.1 Local AE Titles and Presentation Addresses

The local Application Entity Title is derived from the workstation hostname, which is configurable.

6.1.2 Remote AE Titles and Presentation Addresses

The remote AE Title and IP address are configurable as per the requirement of the remote SCP.

6.2 Configurable Parameters

6.2.1 Communication Parameters

- Maximum PDU size is configurable.
- DICOM Upper Layer Timeouts are configurable.

6.2.2 PrecisePLAN Attribute Mapping

- The mapping of certain PrecisePLAN Prescription parameters to the RT Plan IOD can be disabled through configuration setting (see Appendix F).

7. Support of Extended Character Sets

None.

APPENDIX A Applied RT Plan IOD and Mapping to PrecisePLAN Database

A.1 Export of RT Plan Prescriptions

The modules selected from the RT Plan IOD of DICOM for prescription export are given in Table 5 below. If a module is not listed, none of the attributes in that module is sent by PrecisePLAN.

Table 5 Applied Modules in the RT Plan IOD for Export (SCU Role)

IE	Module	Usage
Patient	Patient	M
Study	General Study	M
Series	RT Series	M
Equipment	General Equipment	M
Plan	RT General Plan	M
	RT Prescription	U
	RT Fraction Scheme	U
	RT Beams	C
	SOP Common	M

Table 6 to Table 15 specify, for each of the applied modules above, the attributes sent by PrecisePLAN, further details of mapping onto the PrecisePLAN database, and any attribute specific constraints applicable to their use. Attributes that are never sent by PrecisePLAN are shown shaded.

Note that PrecisePLAN configuration settings may determine whether certain attributes are included in the sent message (see Appendix G).

Table 6 RT Plan Storage SOP Class (SCP) – Patient Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Patients Name	(0010,0010)	PN 1	2	The patients name in PrecisePLAN.
Patient ID	(0010, 0020)	LO 1	2	The patients id number in PrecisePLAN
Patient's Birth Date	(0010, 0030)	DA 1	2	Birth date, time and Gender from original CT input or as modified in Workflow Manager. Not sent to Elekta Precise Desktop.
Patient's Birth Time	(0010, 0032)	TM 1	3	
Patients Sex	(0010, 0040)	CS 1	2	
Other Patient IDs	(0010, 1000)	LO 1-N	3	
Referenced Patient Sequence	(0008, 1120)	SQ 1	3	
>Referenced SOP Class UID	(0008, 1150)	UI 1	1C	Never sent
>Referenced SOP Instance UID	(0008, 1155)	UI 1	1C	
Other Patient Names	(0010, 1001)	PN 1-N	3	
Ethnic Group	(0010, 2160)	SH 1	3	
Patient Comments	(0010, 4000)	LT 1	3	

Note I Handling of Empty Patient Identification Attributes

The Patient ID (0010, 0020) and Patient Name (0010, 0010) attributes of the Patient Module are specified by DICOM as Type 2 and so may legally have zero length. PrecisePLAN always sends a value in Patient Name, and apart from RTOG mode always sends a value in Patient ID. PrecisePLAN always has a patient name but can have no patient Id. In this situation the patient name will also be sent as the patient Id when an ID is required. In RTOG mode all patient module entries are sent empty except the patient name which is sent with the RTOG Protocol and Subject Id.

Table 7 RT Plan Storage SOP Class (SCP) – General Study Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Study Instance UID	(0020, 000D)	UI 1	1	
Study Date	(0008, 0020)	DA 1	2	Date plan was last saved.
Study Time	(0008, 0030)	TM 1	2	Time plan was last saved.
Referring Physicians Name	(0008, 0090)	PN 1	2	First Doctors name in Workflow Manager or sent blank.
Study ID	(0020, 0010)	SH 1	2	
Accession Number	(0008, 0050)	SH 1	2	Sent blank.
Study Description	(0008, 1030)	LO 1	3	
Physician(s) of Record	(0008, 1048)	PN 1-N	3	
Name of Physician(s) Reading Study	(0008, 1060)	PN 1-N	3	
Referenced Study Sequence	(0008, 1110)	SQ 1	3	
>Referenced SOP Class UID	(0008, 1150)	UI 1	1C	
>Referenced SOP Instance UID	(0008, 1155)	UI 1	1C	Never sent

Table 8 RT Plan Storage SOP Class (SCP) – RT Series Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Modality	(0008, 0060)	CS 1	1	"RTPLAN"
Series Instance UID	(0020, 000E)	UI 1	1	
Series Number	(0020, 0011)	IS 1	2	
Series Description	(0008, 103E)	LO 1	3	Plan description
Referenced Study Component Sequence	(0008, 1111)	SQ 1	3	
>Referenced SOP Class UID	(0008, 1150)	UI 1	1C	
>Referenced SOP Instance UID	(0008, 1155)	UI 1	1C	Never sent

Table 9 RT Plan Storage SOP Class (SCP) – General Equipment Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Manufacturer	(0008, 0070)	LO 1	2	Always "Elekta"
Institution Name	(0008, 0080)	LO 1	3	
Institution Address	(0008, 0081)	ST 1	3	Never sent
Station Name	(0008, 1010)	SH 1	3	The PrecisePLAN hostname.
Institutional Department Name	(0008, 1040)	LO 1	3	Never sent
Manufacturer's Model Name	(0008, 1090)	LO 1	3	The host product name is sent: either "PrecisePLAN", "Render-Plan 3-D"
Device Serial Number	(0018, 1000)	LO 1	3	CPU number of host SGI
Software Version	(0018, 1020)	LO 1-N	3	Build identification of DicomRT software
Spatial Resolution	(0018, 1050)	DS 1	3	
Date of Last Calibration	(0018, 1200)	DA 1-N	3	
Time of Last Calibration	(0018, 1201)	TM 1-N	3	
Pixel Padding Value	(0028, 0120)	US 1	3	Never sent

Table 10 RT Plan Storage SOP Class (SCP) – RT General Plan Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
RT Plan Label	(300A, 0002)	SH 1	1	Plan number
RT Plan Name	(300A, 0003)	LO 1	3	Plan description
RT Plan Description	(300A, 0004)	ST 1	3	Never sent
Operators Name	(0008, 1070)	PN 1-N	2	The logged in username running PrecisePLAN
RT Plan Date	(300A, 0006)	DA 1	2	Date plan was last saved.

>>Table Top Vertical Position	(300A, 0128)	DS 1	2C	Each of Vertical, Lateral and Longitudinal can be configured to be sent or not per destination machine. A configurable offset can be added to align non IEC scale systems.
>>Table Top Longitudinal Position	(300A, 0129)	DS 1	2C	
>>Table Top Lateral Position	(300A, 012A)	DS 1	2C	
>>Isocenter Position	(300A, 012C)	DS 3	2C	Never sent
>>Surface Entry Point	(300A, 012E)	DS 3	3	
>>Source to Surface Distance	(300A, 0130)	DS 1	3	Not sent for ARC or multi-port beams.

Table 15 RT Plan Storage SOP Class (SCP) – SOP Common Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
SOP Class UID	(0008, 0016)	UI 1	1	1.840.10008.5.1.4.1.1.481.5 only
SOP Instance UID	(0008, 0018)	UI 1	1	PrecisePLAN will create a plan instance UID for each plan export.
Instance Creation Date	(0008, 0012)	DA 1	3	Last date plan was saved
Instance Creation Time	(0008, 0013)	TM 1	3	Last time plan was saved
Instance Creator UID	(0008, 0014)	UI 1	3	The UID stem defining the workstation.

APPENDIX B Applied SC Image IOD and Mapping to PrecisePLAN Database

B.1 Export of SC Images

Digitally Reconstructed Radiographs (DRRs) are exported from PrecisePLAN by one of RT Image, CR Image or SC Image formats according to the configuration. For brevity, only the SC format is described in this document. The RT and CR Image formats have a similar mapping with attributes added or removed to achieve conformance.

The modules selected from the Secondary Capture Image IOD table of DICOM for image export are given in the table below. If a module is not listed, none of the attributes in that module is sent by PrecisePLAN.

Table 16 Applied Modules in the SC Image IOD for Export (SCU Role)

IE	Module
Patient	Patient
Study	General Study
Series	General Series
Equipment	General Equipment
	SC Equipment
Image	General Image
	Image Pixel
	SC Image
	SOP Common

The tables below specify the applied attributes for each module, and note their mappings from the PrecisePLAN database. If an attribute is not listed, or is grayed out, it is not sent by PrecisePLAN. If an attribute is listed without Notes, there is a mapping from a directly equivalent PrecisePLAN database entry.

Note that PrecisePLAN configuration settings may determine whether certain attributes are included in the sent message (see Appendix G).

Table 17 SC Image Storage SOP Class (SCU) – Patient Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Patients Name	(0010,0010)	PN 1	2	The patients name in PrecisePLAN.

APPENDIX C Applied RTDOSE Image IOD and Mapping to PrecisePLAN Database

C.1 Export of RTDOSE

The modules selected from the RTDOSE IOD table of DICOM for export are given in the table below. If a module is not listed, none of the attributes in that module is sent by PrecisePLAN.

Table 26 Applied Modules in the RTDOSE IOD for Export (SCU Role)

IE	Module
Patient	Patient
Study	General Study
Series	RT Series
Frame of Reference	Frame of Reference
Equipment	General Equipment
Dose	General Image Image Plane Image Pixel Multi-Frame RT Dose RT DVH SOP Common

The tables below specify the applied attributes for each module, and note their mappings from the PrecisePLAN database. If an attribute is not listed, or is grayed out, it is not sent by PrecisePLAN. If an attribute is listed without Notes, there is a mapping from a directly equivalent PrecisePLAN database entry.

Note that PrecisePLAN configuration settings may determine whether certain attributes are included in the sent message (see Appendix G).

APPENDIX D Applied RTSTRUCT IOD and Mapping to PrecisePLAN Database

D.1 Export of RTSTRUCT

The modules selected from the RT Structure Set IOD table of DICOM for export are given in the table below. If a module is not listed, none of the attributes in that module is sent by PrecisePLAN.

Table 39 Applied Modules in the RTSTRUCT IOD for Export (SCU Role)

IE	Module
Patient	Patient
Study	General Study
Series	RT Series
Equipment	General Equipment
Structure Set	Structure Set
	ROI Contour
	RT ROI Observations
	SOP Common

The tables below specify the applied attributes for each module, and note their mappings from the PrecisePLAN database. If an attribute is not listed, or is grayed out, it is not sent by PrecisePLAN. If an attribute is listed without Notes, there is a mapping from a directly equivalent PrecisePLAN database entry.

Table 40 RTSTRUCT Storage SOP Class (SCU) – Patient Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Patients Name	(0010,0010)	PN 1	2	The patients name in PrecisePLAN.

Instance Creator UID	(0008, 0014)	UI 1	3	The UID stem for the export.

APPENDIX E Applied CT Image IOD and Mapping to PrecisePLAN Database

E.1 Export of CT Image

The modules selected from the CT Image IOD table of DICOM for export are given in **Error! Reference source not found.47** below. If a module is not listed, none of the attributes in that module is sent by PrecisePLAN.

Table 48 Applied Modules in the CT Image IOD for Export (SCU Role)

IE	Module	Usage
Patient	Patient	M
Study	General Study	M
Series	General Series	M
Frame of Reference	Frame of Reference	M
Equipment	General Equipment	M
Image	General Image	M
	Image Plane	M
	Image Pixel	M
	CT Image	M
	SOP Common	M

The tables below specify the applied attributes for each module, and note their mappings from the PrecisePLAN database. If an attribute is not listed, or is grayed out, it is not sent by PrecisePLAN. If an attribute is listed without Notes, there is a mapping from a directly equivalent PrecisePLAN database entry.

Table 49 CT Image Storage SOP Class (SCU) – Patient Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Patients Name	(0010,0010)	PN 1	2	The patients name in PrecisePLAN.
Patient ID	(0010, 0020)	LO 1	2	The patients id number in PrecisePLAN
Patient's Birth Date	(0010, 0030)	DA 1	2	
Patients Sex	(0010, 0040)	CS 1	2	
Referenced Patient Sequence	(0008, 1120)	SQ 1	3	
>Referenced SOP Class UID	(0008, 1150)	UI 1	1C	
>Referenced SOP Instance UID	(0008, 1155)	UI 1	1C	
Patient's Birth Time	(0010, 0032)	TM 1	3	
Other Patient IDs	(0010, 1000)	LO 1-N	3	
Other Patient Names	(0010, 1001)	PN 1-N	3	
Ethnic Group	(0010, 2160)	SH 1	3

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Frame of Reference UID	(0020,0052)	UI 1	1	
Position Reference Indicator	(0020, 1040)	LO 1	2	Sent blank

Table 53 CT Image Storage SOP Class (SCU) – General Equipment Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
Manufacturer	(0008, 0070)	LO 1	2	From original imported CT slice, or if not available, 'Elekta'.
Institution Name	(0008, 0080)	LO 1	3	
Institution Address	(0008, 0081)	ST 1	3	Never sent
Station Name	(0008, 1010)	SH 1	3	PrecisePLAN Hostname
Institutional Department Name	(0008, 1040)	LO 1	3	Never sent
Manufacturer's Model Name	(0008, 1090)	LO 1	3	Always 'PrecisePLAN'
Device Serial Number	(0018, 1000)	LO 1	3	CPU number of PrecisePLAN host
Software Version	(0018, 1020)	LO 1-N	3	Software revision # of DICOM software
Spatial Resolution	(0018, 1050)	DS 1	3	
Date of Last Calibration	(0018, 1200)	DA 1-N	3	
Time of Last Calibration	(0018, 1201)	TM 1-N	3	
Pixel Padding Value	(0028, 0120)	US 1	3	Never sent

Table 54 CT Image Storage SOP Class (SCU) – General Image Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes
Image Number	(0020,0013)	IS 1	2	
Patient Orientation	(0020,0020)	CS 2	2C	
Image Date	(0008,0023)	DA 1	2C	
Image Time	(0008,0033)	TM 1	2C	Never sent

Note: Some of the General Image attributes are duplicated in the CT Image Module. They are included in that table and not included here.

Table 55 CT Image Storage SOP Class (SCU) – Image Plane Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes
Pixel Spacing	(0028,0030)	DS 2	1	
Image Orientation (Patient)	(0020,0037)	DS 6	1	
Image Position (Patient)	(0020,0032)	DS 3	1	
Slice Thickness	(0018,0050)	DS 1	2	Always blank
Slice Location	(0020,1041)	DS 1	3	

Table 56 CT Image Storage SOP Class (SCU) –Image Pixel Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes
Rows	(0028,0010)	US 1	1	
Columns	(0028,0011)	US 1	1	
Pixel Representation	(0028,0103)	US 1	1	Always 0, unsigned integer.
Pixel Data	(7FE0,0010)	OW	1	

Table 57 CT Image Storage SOP Class (SCU) –CT Image Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes
Image Type	(0008,0008)	CS 1-n	1	"DERIVED\SECONDARY\AXIAL"
Samples Per Pixel	(0028,0002)	US 1	1	Always 1
Photometric Interpretation	(0028,0004)	CS 1	1	Always "MONOCHROME2"
Bits Allocated	(0028,0100)	US 1	1	Always 16
Bits Stored	(0028,0101)	US 1	1	Always 12
High Bit	(0028,0102)		1	Always 11
Rescale intercept	(0028,1052)		1	Always -1024
Rescale slope	(0028,1053)		1	Always 1

KVP	(0018,0060)		2	From original imported CT slice
Acquisition Number	(0020,0012)		2	Always 1
Reconstruction Diameter	(0018,1100)		3	
Gantry/Detector Tilt	(0018,1120)		3	From original imported CT slice

Table 58 CT Image Storage SOP Class (SCU) – SOP Common Module

Attribute Name	Tag	VR, VM	DICOM Type	Notes/Constraints
SOP Class UID	(0008, 0016)	UI 1	1	1.2.840.10008.5.1.4.1.1.2
SOP Instance UID	(0008, 0018)	UI 1	1	UID generated by PrecisePLAN
Instance Creation Date	(0008, 0012)	DA 1	3	
Instance Creation Time	(0008, 0013)	TM 1	3	
Instance Creator UID	(0008, 0014)	UI 1	3	The UID stem for the export.

APPENDIX F Reported Status Codes

The possible status codes and their meanings are stored in a resource file delivered with the system.

The code and meaning text is displayed to the user whenever a warning or error occurs.

To facilitate multi-destination handling of reported status code meanings a separate resource file per destination can be defined.

The default resource file contains the Elekta PreciseDesktop codes.

APPENDIX G Configurable AE-Specific Attribute Mapping

PrecisePLAN offers the definition of multiple logical destinations. The same physical destination can be defined several times with a different set of configuration options.

Per logical destination the following options can be set:

Option class	Description of options
Capability	RTPLAN RTIMAGE RTSTRUCT RTDOSE CTIMAGE CRIMAGE SCIMAGE
Content settings	Include or not the object in the DICOM message: Shielding Blocks Aperture Blocks Compensator Applicator Dose Calculation Points Bolus Use: Destination Machine Id (otherwise use planning name for the machine) Strict Control Points List of dose depths for planar dose export
Interface settings	Ignore warnings Precise Desktop Validation RTOG Validation Jaw/MLC values rounded to 1mm. or to 0.1mm
DRR (image) settings	Colour (RGB) or MONOCHROME2 Burned in labelling Burned in overlays Orthogonal DRR types

For DRR image export the format will be RTIMAGE, CRIMAGE or SCIMAGE depending on the capability of the destination. If a destination supports more than one format then the preference order is as listed.

Per supported Linear Accelerator the following options can be set:

Option class	Description of options
Machine Id	Remote machine name and serial number
Block Id Settings	Controls the mapping of Block identifiers to DICOM block numbering and labelling
Wedge Settings	For each wedge known by PrecisePLAN define the DICOM wedge type ("STANDARD", "MOTORIZED" or "DYNAMIC")
Machine Settings	Handling of Nominal Cone size and coding, and Maximum permitted MU per control point.
Geometry Settings	Allows an offset to be applied to some geometric values to account for Varian offset scales. Allows PSS translational movements to be ignored. (not sent)
